Heeler Met WP Bump 862905M | 862905W

Description
10-inch calf height Wellington boot. Molded polyurethane bump cap aids in increased life of product plus metatarsal guard.

Upper Materials
Premium full-grain cowhide water resistant leather upper and double stitched in nylon thread. Internal polyurethane metatarsal guard rated to 101.7 joules of force.

Toe Cap
Ergo-Defender™ wide profile steel toe box.
ASTM F2413 M I/75 C/75 Mt 75 EH.

Lining Materials
This boot is lined with Baltico®, which is a soft, non-abrasive, hydrophobic material that wicks perspiration away from the foot, enabling the skin to remain cool and dry.

Full Innersole
A full length footbed that is inserted into the footwear to offer additional support and comfort. This footbed is made from soft polyurethane that will retain its shape and thickness throughout the life of the boot.

Insole
Heavy-duty, flexible anti-bacterial non-woven insole.

Midsole
Directly moulded Polyurethane midsole for greater shock absorption. Penetration Resistant midsole reduces chance of sharp objects piercing the sole.

Outsole
Non-conductive Thermoplastic Urethane (TPU) outsole for superior wear properties. Heat resistant to 266°F. ASTM F2913-11 Coefficient of Friction - Forward Flat Slip Resistance Oily/Wet 0.40.

Superior Underfoot Comfort
The Steel Blue Trisole® Comfort Technology system is a patented three density soling system that offers a high level of comfort, shock absorbency and energy return. The system uses PORON® as energy absorbing pads under the pressure points of the foot to give the wearer superior comfort and offers similar shock absorbency and comfort to sports footwear.

Footwear marked as EH has been tested and shown to withstand the application of 18,000 V at 60 Hz for a period of 1 minute with no current flow or leakage in excess of 1.0 mA in dry laboratory conditions. This footwear is not suitable where anti-static properties are needed.

Note
EH Series footwear is intended for use as secondary protective personal equipment. It is to be used in conjunction with primary protective equipment in areas and environments where there is a need to reduce the risk of electric shock due to accidental contact with live electric wires.
